Your tariff is based on the volume of water you use and has been allocated based on the unit rate which is most beneficial for your business.

Prices for each tariff band include both a fixed charge element and a variable charge. Larger consumption bands include a supplementary annual charge.

Fixed charges cover costs such as metering and service. These do not change irrespective of how much water you use.

Variable charges are based upon the amount of water you used and are charged per unit - expressed as £/m³

The charges below exclude Value Added Tax (VAT) which is payable on most non-domestic water supplies.
